RUNYON
SURFACE PREP

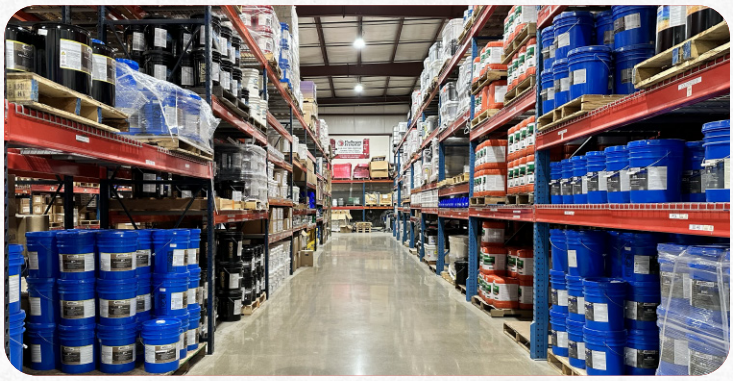

RUNYON

THE RUNYON TEAM

GLOBAL LEADERS IN SURFACE PREP SUPPLY. ONE TEAM. MANY SOLUTIONS.

WHO ARE WE?

Runyon Surface Prep is a full-service sales and rental facility uniquely dedicated to the concrete polishing, surface preparation, resinous flooring, and floor maintenance industries. Our uniqueness comes from providing our customers with a diverse equipment, tooling, and materials portfolio. Being a one-stop shop is one of our greatest assets and we maintain a well-stocked warehouse of equipment and consumables, ready for your project/s at a moment's notice. We can deliver or ship wherever you need, or you can pick up from one of our facilities.

In addition to providing high-quality products for a wide range of applications, we pride ourselves on being a true "partner" to those we do business with. Relationship-building is at the heart of everything we do. Creating long-standing partnerships with our vendors and customers is our goal. Accordingly, RSP goes above and beyond to meet the needs of our customers by offering technical training on surface preparation, edging, polishing, floor coatings, concrete repair, and so much more. We can also help you with customized resources, project highlights, and marketing strategies. You name it – Runyon will make it happen.

For everything Runyon, make sure to visit us online at:
www.runyonsurfaceprep.com

WHAT IS RUNYON'S MISSION?

Our mission is to provide the quality materials and in-depth knowledge needed to ensure our customers' success. We aim to provide exemplary service by exceeding expectations, while forging long-standing relationships with customers, vendors, and industry partners.

OUR COMMITMENT TO *EXCELLENCE*

At **Runyon Surface Prep**, we are committed to crafting floor grinders that set the standard for strength, precision, and reliability. Every machine we build is backed by our promise of innovation, durability, and unwavering support for our customers' success. **Shop with RSP today and see what makes us great.**

17" SWING
110V

The RSP 17" Floor Polisher is equipped with a heavy-duty, planetary triple-idler, all-steel helical-cut gear drive, with steel coupler and an exclusive 180 frame TEFC (totally enclosed fan cooled) motor. TEFC units are ideal for the harshest conditions – dust, moisture, chemicals– and great for sanding, screening, stone care, concrete work, and other applications that require "brute force."

JC-9
110V

The JC-9 is a 9" 110-volt Direct Drive Grinder that runs on 15-amp service. As there are no parts to service and no belts to replace, it is basically maintenance-free. With a combination of power and simplicity, the 90 lb JC-9 resurfaces hundreds of square feet per hour and can fit inside a car trunk with the handlebar collapsed.

EASY TRANSPORT!

RSP-5
230V 1PH

The RSP-5 is a versatile 22" medium-platform planetary grinder designed for coating removal, surface preparation, and concrete polishing. With a heavy-duty, three-head gear-driven system, it delivers consistent, high-speed performance. Powered by 230V single-phase, it's ideal for small retail, commercial, or residential projects. This upgraded model is also CE certified for quality assurance.

RSP-6
240V/480V 3PH

The RSP-6 is a medium platform 27" planetary grinder suitable for coating removal, surface prep, and polishing concrete. Its heavy duty, three head gear driven design ensures reliable high speed production. This machine is available in 3 phase 240V and 480V or single phase 240V making it perfect for small to midsize projects or residential polishing. This upgraded machine is CE certified.

RSP-8
480V 3PH

The RSP-8 is a robust planetary grinder designed for medium to large-scale projects. Its heavy-duty, gear-driven three-head system delivers exceptional production rates. Featuring an ergonomic handle and intuitive controls, it ensures ease and comfort during operation. The grinder comes fully equipped with one of the most efficient and complete packages available on the market.

RSP-6
PROPANE

The RSP-6 is a medium platform 27" planetary grinder suitable for coating removal, surface prep, and polishing concrete. Its heavy duty, three head gear driven design ensures reliable high speed production. This machine is available in 3 phase 240V and 480V or single phase 240V making it perfect for small to midsize projects or residential polishing. This upgraded machine is CE certified.

RSP-8
PROPANE

The RSP-8 is a robust planetary grinder designed for medium to large-scale projects. Its heavy-duty, gear-driven three-head system delivers exceptional production rates. Featuring an ergonomic handle and intuitive controls, it ensures ease and comfort during operation. The grinder comes fully equipped with one of the most efficient and complete packages available on the market.

RSP SPYDER
480V 3PH

Our 2-head, 6-diamond grinder is built for large industrial projects, delivering the power needed for heavy prep and removal jobs. With counter-rotating discs for balanced torque and stage start motors to reduce load on startup, it's designed for operator ease and efficiency. Featuring a floating urethane shroud for total dust control.

SURFACE PREP

THE INITIAL STEPS TO SUCCESS...

Our range of surface prep equipment is crafted with power and efficiency to properly prepare your floor.

WHY USE A SCARIFIER?

Concrete scarification is a mechanical surface preparation process that aggressively removes coatings, buildup, and surface imperfections while creating a textured profile for proper adhesion. Using rotating cutter drums, scarifiers quickly level high spots, open dense concrete, and prepare slabs for overlays, coatings, or resurfacing systems.

GASOLINE POWERED ⟶

Shot blasters, concrete shavers, and scarifiers are essential surface prep machines used to remove coatings, contaminants, and surface irregularities while creating the proper concrete profile for coatings, overlays, and polishing systems.

SHOTBLASTERS

WHY USE A SHOTBLASTER?

Shotblasting is a fast, eco-friendly way to clean and profile concrete or steel, removing coatings and contaminants while creating the ideal surface for strong adhesion. It improves durability, reduces downtime, and ensures safer, longer-lasting results across industrial and commercial applications.

SHAVERS

WHY USE A SHAVER?

A concrete shaver provides fast, controlled surface preparation by efficiently removing coatings, adhesives, high spots, surface imperfections and quickly reaching large aggregate while maintaining a consistent depth of cut. It creates a clean, uniform surface profile that improves adhesion for overlays, epoxies, and polishing systems, reducing the risk of coating failure or delamination.

Joint and crack repair is essential in the concrete industry to restore structural integrity and prevent further deterioration of the slab. Properly repairing joints and cracks reduces moisture intrusion, minimizes movement, and creates a smooth, uniform surface for coatings, polishing, or overlays. This process extends the life of the floor and improves the performance of finished systems.

ANDERSON INNOVATIONS

- **SCRAPING WITH ANDERSON INNOVATIONS**

  Flooring removal can be a difficult job, especially when it comes to small spaces and hard to reach spots. Anyone who has spent a day pulling narrow strips of carpet out of an aggressive adhesive by hand or scraping heavy mastic with an 8" razor can attest to that. For flooring that's hard to remove, walk-behind floor scrapers are worth their weight in gold. Whether you're running a rental company, contracting, an installer looking to add a new service, or a veteran demo contractor looking to supplement your larger equipment (from 90 lbs to 400lbs), we have a machine that will do the job.

  Floor scraping machines will save you on labor. Ride-on scrapers allow the user to tackle large areas and hard to remove surfaces without needing an equally large crew to get the job done quickly and efficiently. Our patented designs are extremely durable and ready to take on the worst demo jobs out there.

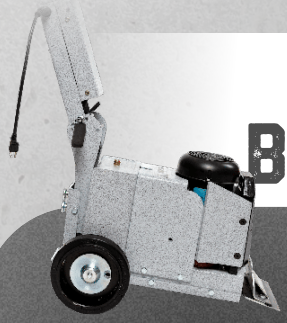

RIDE ON

ES 2000

The ES2000 is a machine that solves problems encountered in flooring removal. Problems such as ride-on machines getting so big and heavy they are hard to transport without large trucks with equally large liftgates or custom trailers. Problems like machines being too unstable due to high center of gravity, or having no convenient place to put all the extra attachments you need to keep with the machine. The ES2000 solves these problems. Weighing in at just under 2000 lbs it can be loaded in a standard passenger elevator without removing any weights. Its patented frame design with Forward Slope Technology (FST®) maximizes the performance of the machine by keeping heavy duty support structures close to the line of force. This allows the machine to operate as effectively as heavier machines without the extra weight. The low center of gravity makes the machine safer and more comfortable to operate with the low seat height.

WALK BEHIND

ES 200

The ES200 is a "light" and fast machine. With working speeds up to 68 feet per minute it is the fastest hydraulic machine in its class. Its patented design improves its efficiency significantly over other hydraulic machines. Our machines have no chains, sprockets, or other power robbing transmission parts. The electrical system is simple and robust with no complicated electronics. The ES200 is self propelled in forward and reverse. The tapered spool valve and simple controls give the operator confidence in tight spots. The handle is adjustable to 6 different positions including a low position that allows for clearance working under standard height desks and a transport position that reduces the height of the machine so it can fit in low clearance vehicles. If you are looking for a high performance mid-weight self propelled scraper the ES200 is the machine for you.

Runyon Surface Prep Data Services delivers industry-leading, high-performance tools for capturing accurate polishing data for your floors. Call us at **(317)-775-0682** to learn more.

DATA COLLECTION

When evaluating polished concrete, with Runyon Data Services – you will know it's been done right!

Runyon Data Services is the most effective tool on the market to take measurements, compare readings, and store accurate data on polished concrete floor work. Our unique proprietary system consists of three components: the Runyon Data Services Cart (with internal processor), the meters (sold separately), and the app (by subscription).

This is how it works. First, the tandem meters take a full array of precise measurements on the polished concrete floor. Then, using our patent-pending technology, the "brains" of the cart processes those measurements, converting readings into functional data to send wirelessly to the app. Finally, the Runyon app displays the information for immediate review and use, effortless dissemination, and long-term storage.

Runyon Data Services Cart:

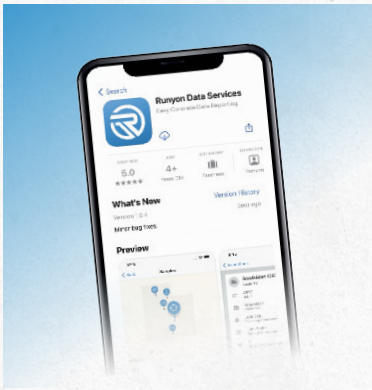

Our integrated cart contains a self-powered processor that functions as the "nervous system" of the operation, connecting the meters wirelessly to the Runyon app. The cart also allows you to roll the system between sample areas without bending or lifting.

Meters:

RDS is compatible with the following meters:
- Rhopoint LITEsurf Roughness meter
- Rhopoint NOVO-GLOSS 60-degree Glossmeter
- Rhopoint IQ 20/60/85-degree Gloss/Haze/DOI-RIQ meter

Runyon App:

Our integral application can be downloaded from the app store to function on any handheld device (Iphone, Android, tablet). This is the "brains" of the system, as it takes the combined meter data from the Runyon Data Services Cart and puts it to specific use by creating a "Field Report."

The field report is a compilation of all measurements and data collected by both meters in one, easy-to-read package. Not only does it display samples and averages, but it contains additional information to include: photos, signatures, date/time, location, contractor information and a QA checklist. The document is both immediately accessible and available for long term use and storage. It can also be messaged, emailed and/or printed at a simple press of a button in the app.

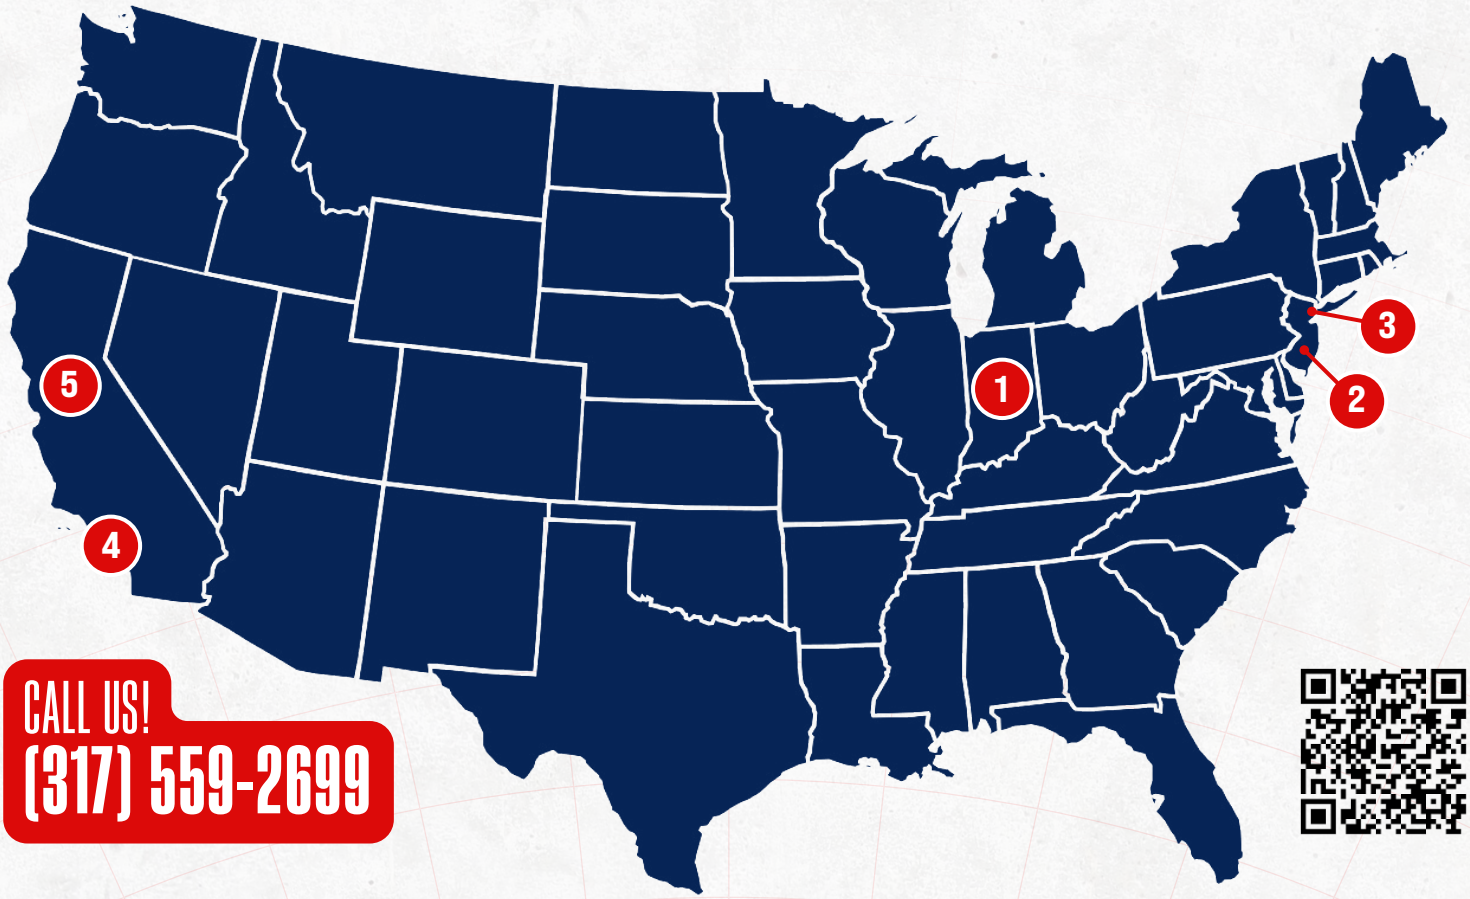

Runyon Data Services will define the shine!

The entire Runyon Data Services System fits into our durable, rolling case for easy transportation. In addition, it's the perfect size for an airline carry on.

With such functional data at your fingertips, verifying the quality of a polished concrete floor job is now a breeze! No matter how many samples are required, this is all done with a simple push of a button on the app. The days of crouching down, bending, and kneeling for each sample are over. When you are ready to take another reading, just roll the integrated cart to your next sample location and press that button again. Not only is Runyon Data Services incredibly convenient, but with the instant ability to confirm contractor adherence to specs, you can easily standardize both polishing and appearance throughout multiple facilities.
